Implementation of arrays

```java
package p2;

public class ImpOfArrays {

    public static void main(String[] args) {
        int a[] = { 10, 20, 30, 40, 50 }; // single dimentional array
        for (int i = 0; i < 5; i++) {
            System.out.println("");
        }

        int[][] b = { { 2, 4, 6, 8 }, { 3, 6, 9, 12 } };
        //multidimentional array
        System.out.println("\n Length of row 1:" + b[0].length);
    }
}
```
